

I. Project Title

Sari-Sort: A Micro-Inventory & Expiration Tracker for Sari-Sari Stores in The Philippines

II. Problem Statement

In the Philippines, neighbourhood convenience stores or locally known as sari-sari stores, have long been part of our daily lives. However, most of these store owners usually keep track of their products manually through pen and paper or maybe even by memory. Such methods could lead to untracked spoiled products, unexpectedly running out of high-demand products, and not being able to properly calculate daily profit values. This issue directly affects small-scale entrepreneurs operating on a tight budget, making product waste a huge threat to their livelihoods.

III. Project Objectives

1. Build a working database structure that can easily store and track details like expiration dates for at least 50 different kinds of products.
2. Create an automatic warning system that flags when stocks are running low with like 5 pieces or have about 1 week to expire.
3. .Set up a daily sales tracking system that updates stock levels automatically whenever a sale is logged and shows the day's total profit.

IV. Planned Features

1. Dashboard

- ★ A screen that displays inventory and the most urgent items that need to be restocked.

2. Sales Logger

- ★ Feature where you can press on an item, input how many were sold, and hit enter to update everything.

3. Daily Report

- ★ Summary showing the remaining inventory and profit made.

4. Alerts

- ★ Warnings so that the owner spots expiring or out of stock products.

V. Planned Inputs and Outputs

1. Inputs

- ★ Name
- ★ Category
- ★ Buying Price
- ★ Selling Price
- ★ Stock count
- ★ Expiration Date
- ★ Total number of items bought(by customer)
- ★ Name of item bought(by customer)

2. Outputs

- ★ Alert Notifications
 - a) "Alert! Only 12 C2 left!"

b) "Warning! Expiring in 1 week!"

★ Daily Report

VI. Logic Plan

START

// 1. Get everything ready

SET product_list = []

SET low_stock_limit = 5

SET total_sales_today = 0

SET app_is_running = True

// 2. Keep the app open until the user wants to close it

WHILE app_is_running IS True

PRINT "--- (ノ◡ノ)/*:° ✧ SARI-SORT MENU ✧:*° ---"

PRINT "1. Check Stock & Alerts 📋"

PRINT "2. Add a New Product ➕"

PRINT "3. Sell an Item 🛒"

PRINT "4. See Today's Profit 💰"

PRINT "5. Close App ✖"

CHOOSE menu_option

// 3. Figure out what the user wants to do

IF menu_option == 1 THEN

// Look through all products

FOR EACH item IN product_list

PRINT item.name, item.stock, item.expiry_date

// Check if stock is low

IF item.stock <= low_stock_limit THEN

PRINT "⚠️ (◉_◉) Running low!"

END IF

// Check if it's spoiling soon

IF item.expiry_date is less than 7 days away THEN

PRINT "🕒 (¯□¯;) Expiring soon!"

END IF

END FOR

ELSE IF menu_option == 2 THEN

// Add a new product to the shelf

ASK for name, price, stock, expiry

SAVE new product details into product_list

PRINT "✨ Product added successfully! (◡‿◡)"

```

ELSE IF menu_option == 3 THEN
    // Sell something
    ASK for item_name and quantity_sold
    FIND item_name in product_list

    IF item exists THEN
        IF item.stock >= quantity_sold THEN
            // Deduct stock and add to cash drawer
            SET item.stock = item.stock - quantity_sold
            SET transaction_total = quantity_sold * item.price
            SET total_sales_today = total_sales_today + transaction_total
            PRINT "Sale logged! Total: ₱" + transaction_total + " \(\_▽\_)/"
        ELSE
            PRINT "🔴 (>_<) Error: You don't have enough stock left!"
        END IF
    ELSE
        PRINT "🔴 (ノ◦□◦)ノ ㄣ ㄣ ㄣ Error: Item doesn't exist."
    END IF

ELSE IF menu_option == 4 THEN
    // Check end of day numbers
    PRINT "--- 💰 TODAY'S REPORT 💰 ---"
    PRINT "Total Cash Earned Today: ₱" + total_sales_today + " (💵_💵)"

ELSE IF menu_option == 5 THEN
    SET app_is_running = False
    PRINT "Shutting down. Great job today! 🌚 (〰_o〰) zzZ"
ELSE
    PRINT "┐ ('~`;) ┐ Invalid choice, try picking a number from 1 to 5."
END IF
END WHILE

END

```
